Nearest Neighbor Retrieval:
“Generalization through Memorization”

Nearest Neighbor Retrieval:
“Generalization through Memorization”
for Machine Translation

Key Results

Memorizing the training data improves machine translation **generalization**, and allows a multilingual model to **specialize**.

A single translation model can **adapt** to multiple domains by memorizing domain-specific data, without any in-domain training.

Memorization can make model predictions more **interpretable**.

Nearest Neighbor Language Models (kNN-LM)

[Khandelwal et al., 2020]

Interpolate a pre-trained (autoregressive) language model with a k-nearest neighbors model, with NO additional training.

kNN-LM Datastore

<i>Training Contexts</i>	<i>Keys=LM Context Representations</i>	<i>Values=Targets</i>
<i>Tony Stark fought on</i>		<i>Titan</i>
<i>Tony Stark is married to</i>		<i>Pepper</i>
<i>Tony Stark lives in</i>		<i>Malibu</i>
...
<i>Tony Stark is a resident of</i>		<i>Malibu</i>

Nearest Neighbor Retrieval

Test Context: *Tony Stark resides in* ???

Query = Test Context Representation

<i>Training Contexts</i>	<i>Keys=LM Context Representations</i>	<i>Values=Targets</i>
<i>Tony Stark fought on</i>		<i>Titan</i>
<i>Tony Stark is married to</i>		<i>Pepper</i>
<i>Tony Stark lives in</i>		<i>Malibu</i>
...
<i>Tony Stark is a resident of</i>		<i>Malibu</i>

kNN-LM

Test Context: *Tony Stark resides in* ???

<i>Language Model</i>	
<i>Malibu</i>	<i>0.2</i>
<i>Titan</i>	<i>0.2</i>
<i>...</i>	<i>...</i>

<i>k-Nearest Neighbors</i>	
<i>Malibu</i>	<i>0.8</i>
<i>Titan</i>	<i>0.2</i>

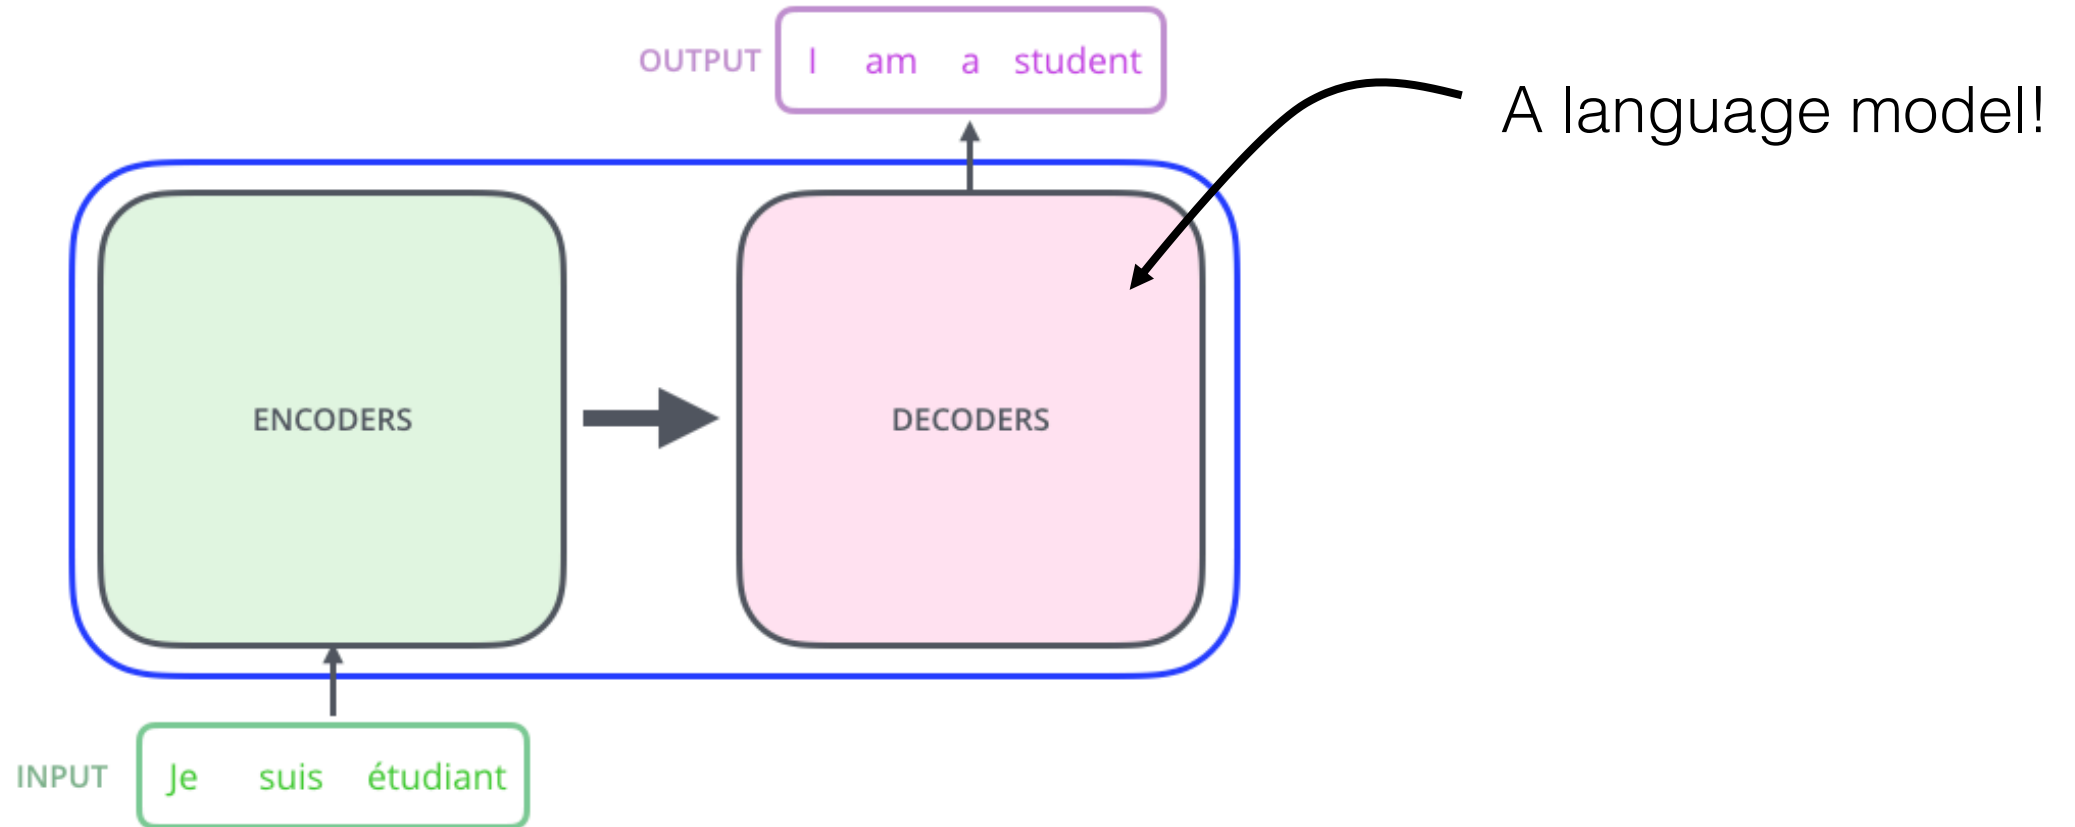

<i>kNN-LM</i> $(1 - \lambda) p_{\text{LM}} + \lambda p_{\text{kNN}}$	
<i>Malibu</i>	<i>0.6</i>
<i>Titan</i>	<i>0.2</i>
<i>...</i>	<i>...</i>

Nearest Neighbor Machine Translation (kNN-MT)

Interpolate a pre-trained machine translation model with a k-nearest neighbors model, with NO additional training.

The MT decoder is a **language model**.

kNN-MT

Stored representations rely on ground truth prior context as well as the source sequence.

kNN-MT

Stored representations rely on ground truth prior context as well as the source sequence.

Experiments

Key Results

Memorizing the training data improves machine translation **generalization**, and allows a multilingual model to **specialize**.

A single translation model can adapt to multiple domains by memorizing domain-specific data, without any in-domain training.

Memorization can make model predictions more interpretable.

Memorizing MT training data

State-of-the-art German-English translation model.

[Ng et al., 2019]

770 million key-value pairs memorized.

<i>Model</i>	<i>BLEU (↑)</i>
<i>Base MT</i>	<i>37.59</i>

Memorizing MT training data

State-of-the-art German-English translation model.

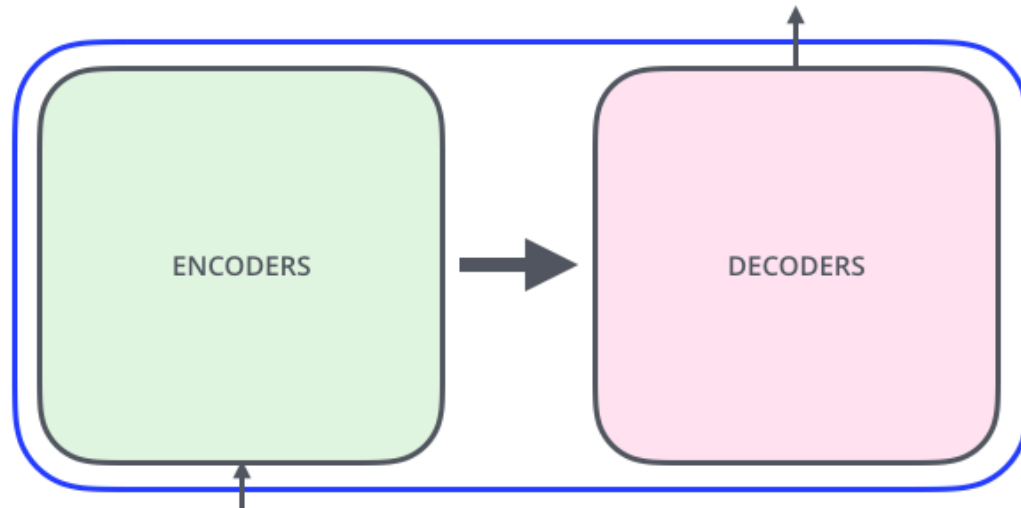

[Ng et al., 2019]

770 million key-value pairs memorized.

<i>Model</i>	<i>BLEU</i> (↑)
<i>Base MT</i>	<i>37.59</i>
<i>kNN-MT</i>	<i>39.08</i>

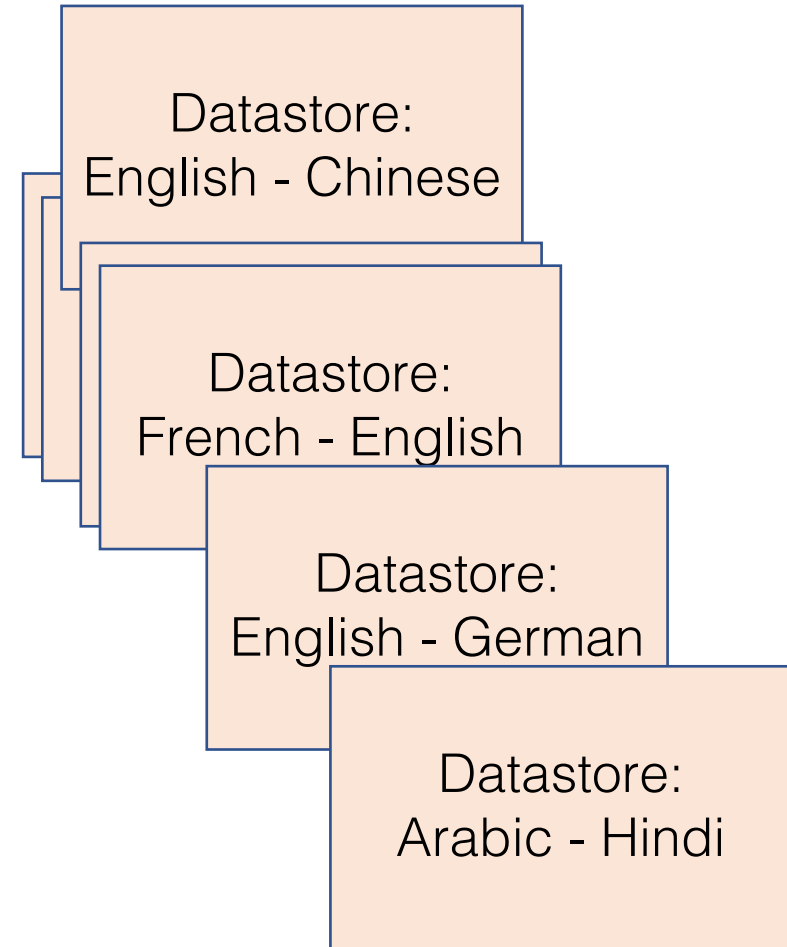

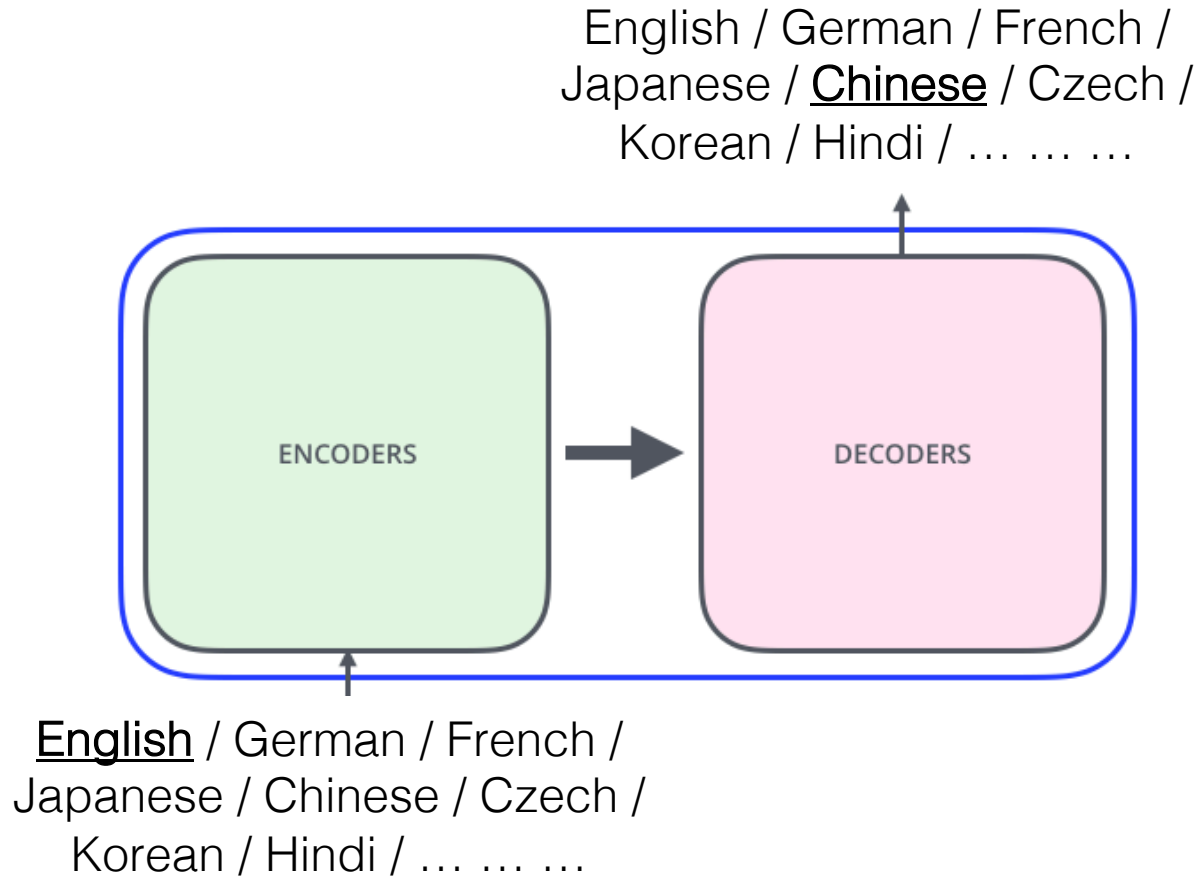

Multilingual MT

English / German / French /
Japanese / Chinese / Czech /
Korean / Hindi /

English / German / French /
Japanese / Chinese / Czech /
Korean / Hindi /

Multilingual MT with kNN-MT

Specialized multilingual MT models

<i>Model</i>	<i>English-German</i>	<i>Chinese-English</i>	<i>English-Chinese</i>
<i>Base MT</i>	<i>36.47</i>	<i>24.23</i>	<i>30.22</i>

Specialized multilingual MT models

<i>Model</i>	<i>English-German</i>	<i>Chinese-English</i>	<i>English-Chinese</i>
<i>Base MT</i>	36.47	24.23	30.22
<i>kNN-MT</i>	39.49 (+3.02)	27.51 (+3.28)	33.63 (+3.41)
<i>Datastore Size</i>	6.50B	1.19B	1.13B

Key Results

Memorizing the training data improves machine translation generalization, and allows a multilingual model to specialize.

A single translation model can **adapt** to multiple domains by memorizing domain-specific data, without any in-domain training.

Memorization can make model predictions more interpretable.

Domain Adaptation in MT: News to Medical

<i>MT Training Data</i>	<i>Datastore</i>	<i>BLEU on Medical (↑)</i>
<i>Medical (Aharoni & Goldberg, 2020)</i>	-	56.65
<i>News</i>	-	39.91

Domain Adaptation in MT: News to Medical

<i>MT Training Data</i>	<i>Datastore</i>	<i>BLEU on Medical (↑)</i>
<i>Medical (Aharoni & Goldberg, 2020)</i>	-	56.65
<i>News</i>	-	39.91
<i>News</i>	<i>Medical (5.7M)</i>	54.35

A single MT model can be useful in multiple domains by simply adding a domain-specific datastore!

Domain Adaptation in MT: News to Legal

<i>MT Training Data</i>	<i>Datastore</i>	<i>BLEU on Legal (↑)</i>
<i>Legal (Aharoni & Goldberg, 2020)</i>	-	<i>59.00</i>
<i>News</i>	-	<i>45.71</i>
<i>News</i>	<i>Legal (18.3M)</i>	<i>61.78</i>

A single MT model can be useful in multiple domains by simply adding a domain-specific datastore!

Key Results

Memorizing the training data improves machine translation generalization, and allows a multilingual model to specialize.

A single translation model can adapt to multiple domains by memorizing domain-specific data, without any in-domain training.

Memorization can make model predictions more **interpretable**.
